Name – Jaskaran Singh

Student ID – 100387734

Course – INFO 1213 – R95

DESCRIPTION OF THE BUSINESS

- **BUSINESS**

My business will serve my field of interest i.e. Food. So, I will open a pizza and food

restaurant majorly but not only based on Indian style and its name will be "Hangout -

Pizza and Curry"

- **PRODUCTS/SERVICES**

1. **Products –**

o Pizza

   ▪ Veg / Non-Veg

o Food

   ▪ Veg / Non-Veg

The main focus of my restaurant will be on different kinds of pizza along with the

Indian style food. The restaurant will also be providing different kind of drinks as

most people love to have them when eating pizza. Along with this, we will also be

serving mouth-watering starters/appetizers.

2. **Services**

o Pick Up

o Delivery

o Dine In

Our restaurant is providing all the three services that are required by the people. People can choose to eat at restaurant or get delivered their food and also can pick up their food from the restaurant as per their preference.

- **POTENTIAL CUSTOMERS**

There is no specific target of customers for us because most of the people love pizza whether they are children, younger or elder people. It's just that their taste varies and so to compensate that we will try to have wide range of pizzas. Same goes for food as everyone enjoys restaurant's food at least once a week. The preference is that it should be tasty and healthy. Another important thing is the international students. As every year hundreds or thousands of international students are attracted to Canada and in Surrey, which is also my restaurant location, most of the students living around are from India, so it would be better option for me as an owner to open an Indian style restaurant.

There is little change in the homepage, I have added another jumbotron after navbar stating the
name of restaurant and its brand slogan/taglines. I have done this because in my older

framework, there was no sign of restaurant's name and it is the most important thing to use in website. So, I have to made little change in the design.

MENU PAGE

PIZZA

Pepperoni Pizza
Hawaiian Pizza
Butter Chicken Pizza
BBQ Pizza

I have corrected my mistake in menu page, as in the framework I didn't ask the customer his preference of service and additional notes. In addition to this, I forgot to put the placeholder for filling delivery address. That is why, there is change in the menu page.
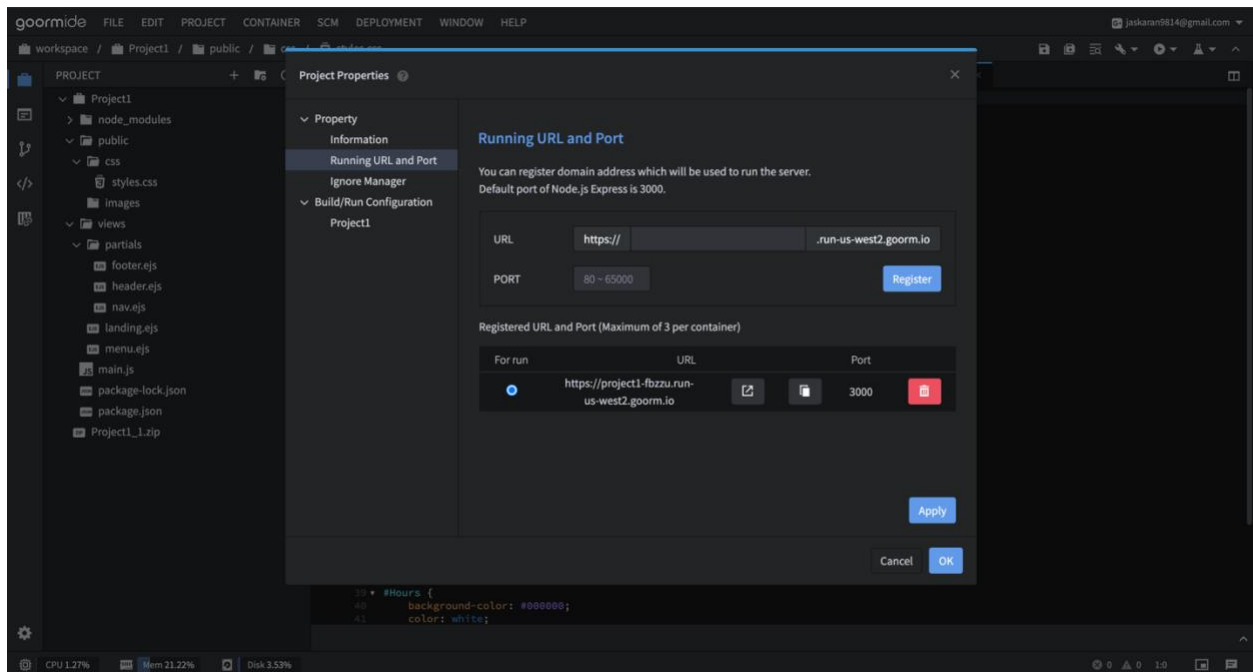

Instructions to run my project in GoormIDE

**Step 1:** Copy my workspace url ' https://goor.me/2q2cd '
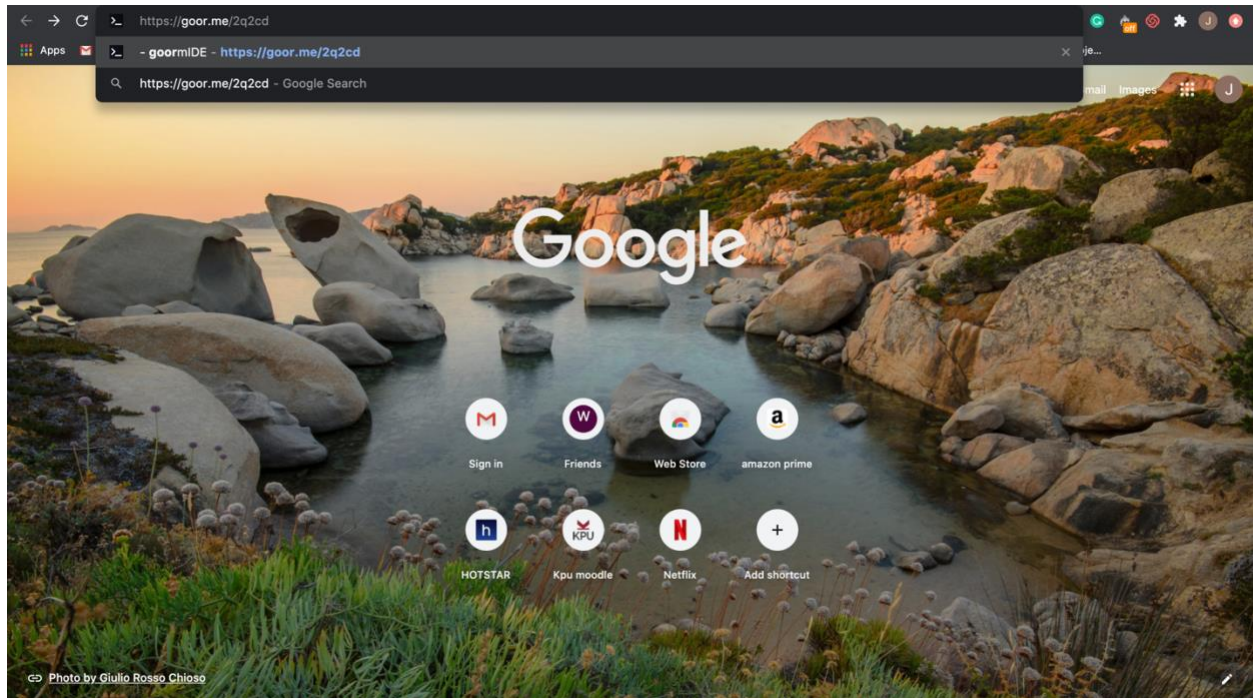

Step 2: You will be redirected to my workspace. If an alert appears like shown in the following screenshot, just press ok. It will be fine.
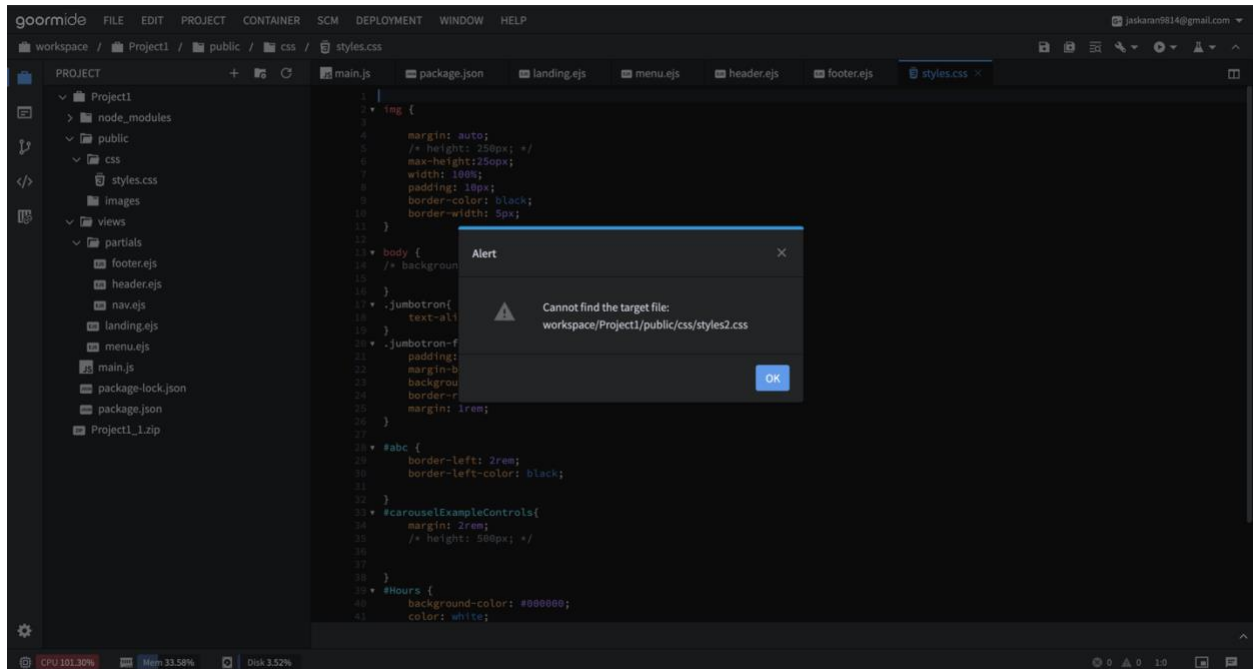

Step 3: Go to the Project/Running URL and Port and then copy the URL from there running in port 3000 and paste it in google.

Step 4: Go in the terminal of my workspace and pass the command 'npm run server'. It will run

the server and start the website as shown in the following screenshot

Step 5: Now, the link you have pasted from step 3 is good to go and you can run that link to have a look at my website.
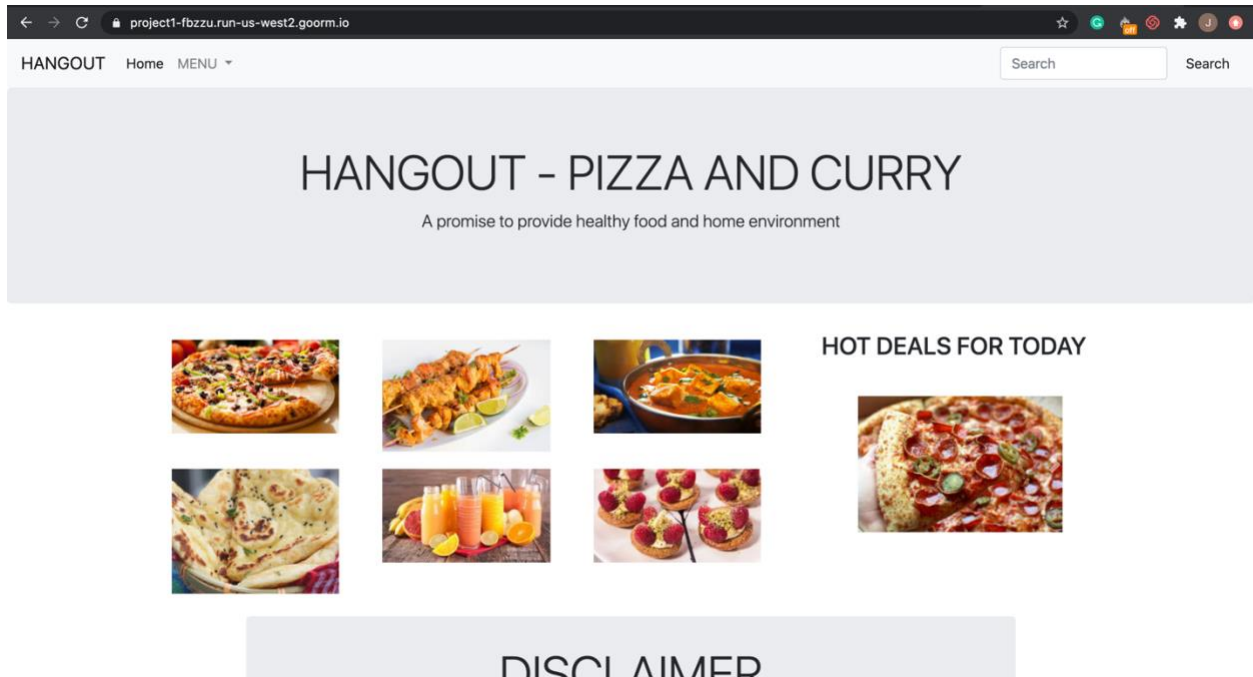

TECHNICAL FEATURES

My restaurant website includes some good features to make it easy for the people as well as for the restaurant. My first priority was to make use of partials files (headers.ejs/footers.ejs/nav.ejs) so that my code in other files can be reduced.

- <%- include("partials/header", {header:"Hangout - Pizza and Curry "}) %>

- <%- include("partials/header", {header:"MENU"}) %>

- <%- include("partials/footer") %>

- <%- include("partials/nav") %>

Another feature I have added is of Menu feature in Navbar. People can directly select the products they want to have directly from the home page rather than firstly going to the menu page and then have a look at each kind of item (they can directly select pizza, drinks or shakes

etc.) , but on the other side if they want to go to menu page first, that option (ALL) is also included.

```html
<div class="dropdown-menu" aria-labelledby="navbarDropdown">
    <a class="dropdown-item" href="/menu">ALL</a>
    <div class="dropdown-divider"></div>
    <a class="dropdown-item" href="/menu/#Pizza">PIZZA</a>
    <div class="dropdown-divider"></div>
    <a class="dropdown-item" href="/menu/#Appetizers">APPETIZERS</a>
    <div class="dropdown-divider"></div>
    <a class="dropdown-item" href="/menu/#Dishes">DISHES</a>
    <div class="dropdown-divider"></div>
    <a class="dropdown-item" href="/menu/#Rice">RICE/BREADS</a>
    <div class="dropdown-divider"></div>
    <a class="dropdown-item"
href="/menu/#Drinks">SOFTDRINKS/SHAKES</a>
    </div>
```

For the hot deals, I have kept it in carousel, so that people don't have to look at other area of webpage to find different deals. All the deals will be shown at one place and people can choose from it directly. Also, it would be easier for me to update the regular hot deals with this method. The another feature I found to be interesting is of selecting the type of service they want for their food like pick up, dine in or delivery.
